

MongoDB Aggregation Operators – Hinglish Guide

Accumulator Operators (Group mein use hote hain)

- \$sum – Numerical values ka sum nikalta hai.
- \$avg – Average value nikalta hai.
- \$min – Sabse chhota value.
- \$max – Sabse bada value.
- \$push – Saare values ek array mein dalta hai.
- \$addToSet – Unique values ka array.
- \$first, \$last – Pehla ya aakhri document ki value.
- \$count – Documents ki ginti.
- \$top, \$bottom, \$topN, \$bottomN – Sorted order ke top/bottom elements.
- \$firstN, \$lastN – First ya last N elements.
- \$mergeObjects – Documents ko merge kar ke ek bana deta hai.
- \$stdDevPop, \$stdDevSamp – Standard deviation (population/sample).
- \$median, \$percentile – Median ya percentile values (v7.0+).

Arithmetic / Expression Operators (Project/AddFields mein use)

- \$add – Addition (numbers/dates).
- \$subtract – Subtraction.
- \$multiply – Multiplication.
- \$divide – Division.

Comparison / Logical Operators (Match ya Expr mein)

Examples: \$eq, \$gt, \$lt, \$gte, \$lte, \$or, \$and, \$size, \$type.

Inhe find() ya \$match mein use karte hain.

Aggregation expressions ke liye \$expr: { \$gt: ["\$age", 20] } type conditions.
